

L1S	Gennius Pergolas
-----	------------------

The Gennius L1S has the distinction of being the only KE pergola that is made with wood rails. Available in either Dark Walnut or Semi-gloss Mahogany finish, L1S adds a feeling of warmth and nostalgia to the KE Gennius line.

The L1S fabric guide rail system is supported by engineered, laminated wood rafters, header and columns. The waterproof fabric is sealed against the patented side rails with a double gasket design to direct rainwater through a system of integrated gutters and downspouts. Easy to install, L1S is a durable, wind-resistant shading solution whose classic style fits any outdoor space.

Complete your outdoor space with optional screen enclosure which can be manual or motorized. Fabric options include screen or clear vinyl.

An optional hood protects the motor assembly from the elements and keeps debris from collecting on the folded fabric when your L1S is retracted.

				
Shade on demand with a retractable, waterproof roof when needed.	L1S has an engineered wood frame that is a durable, permanently installed structure.	Maximum width of a single unit is 42'8". Widths greater than 14'9" require additional guide rails and posts.	Maximum projection of a single unit is 19'8"	EN 1090:2014 EN 13561:2015
